

IDEATION

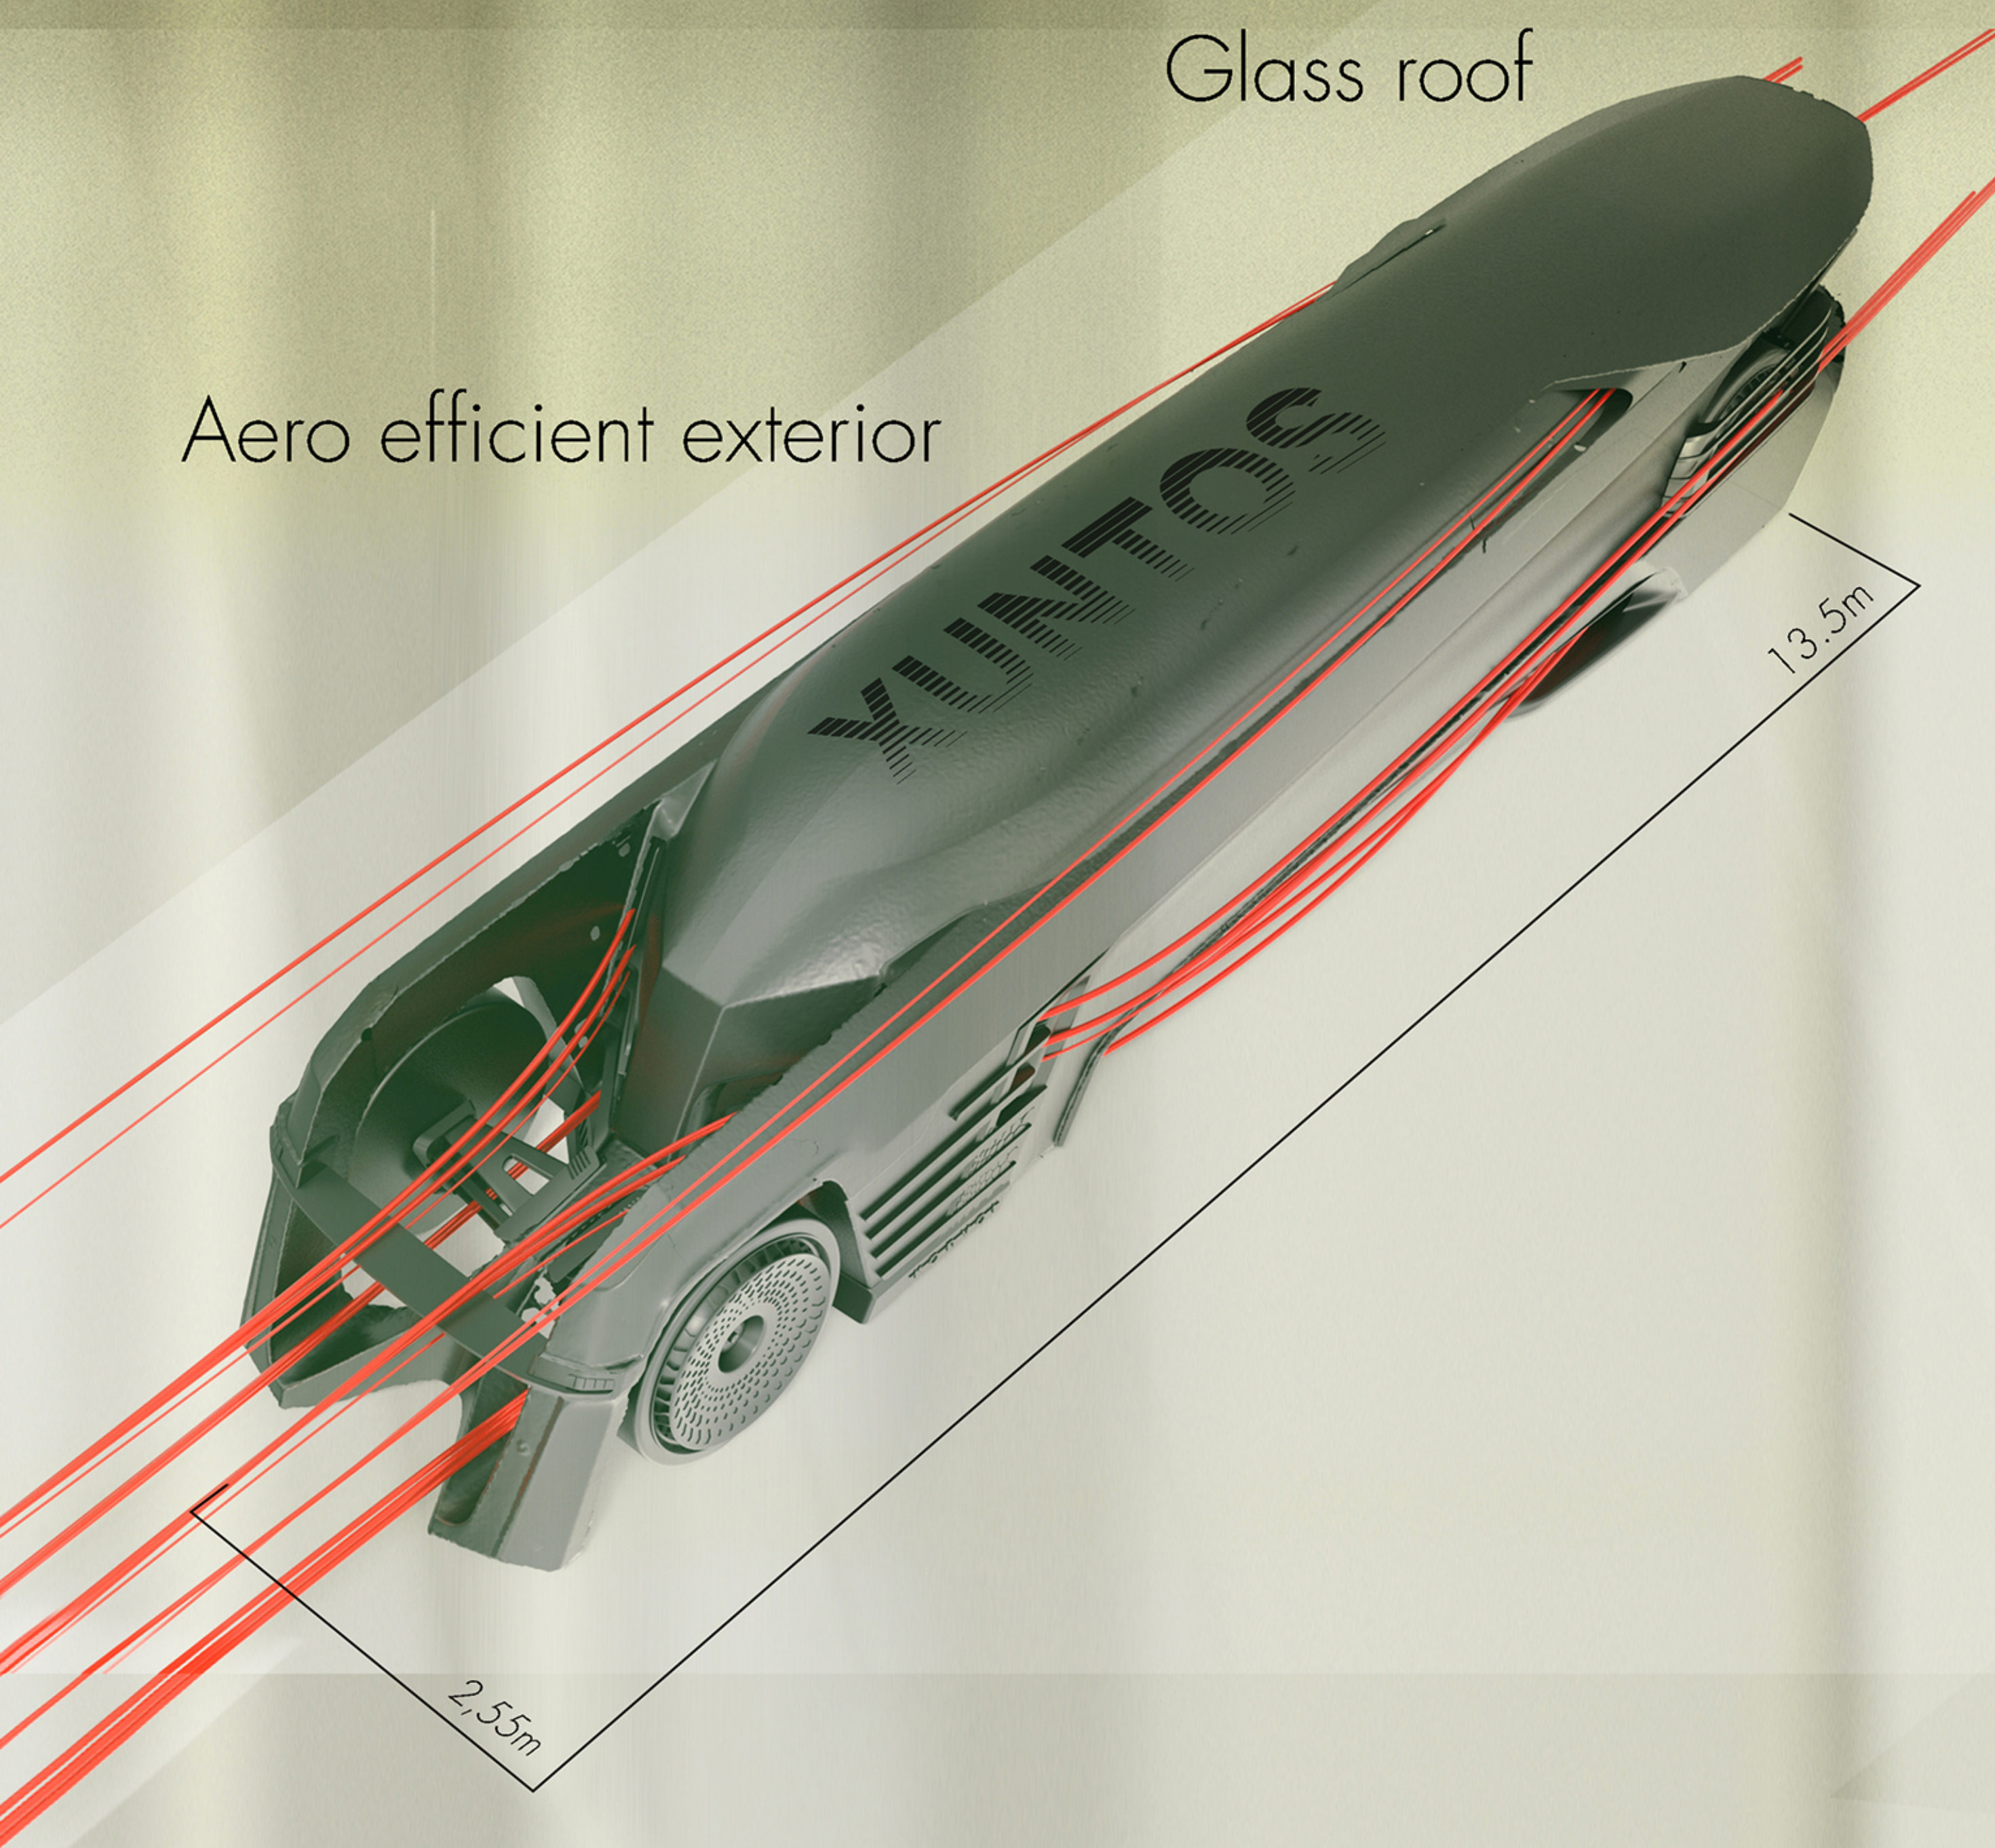

CONCEPT

Xuntos is a concept of a fast, comfortable and socially engaging long distance bus. Travelling autonomous and electric with up to 250 kph, Xuntos connects cities with bad rail - but good road connections. The idea is to use existing infrastructure - the autobahn. Inspired from art deco trains of the 1920s, Xuntos wants to make hopping on a bus an exiting experience again.

Access for everyone

Glass roof

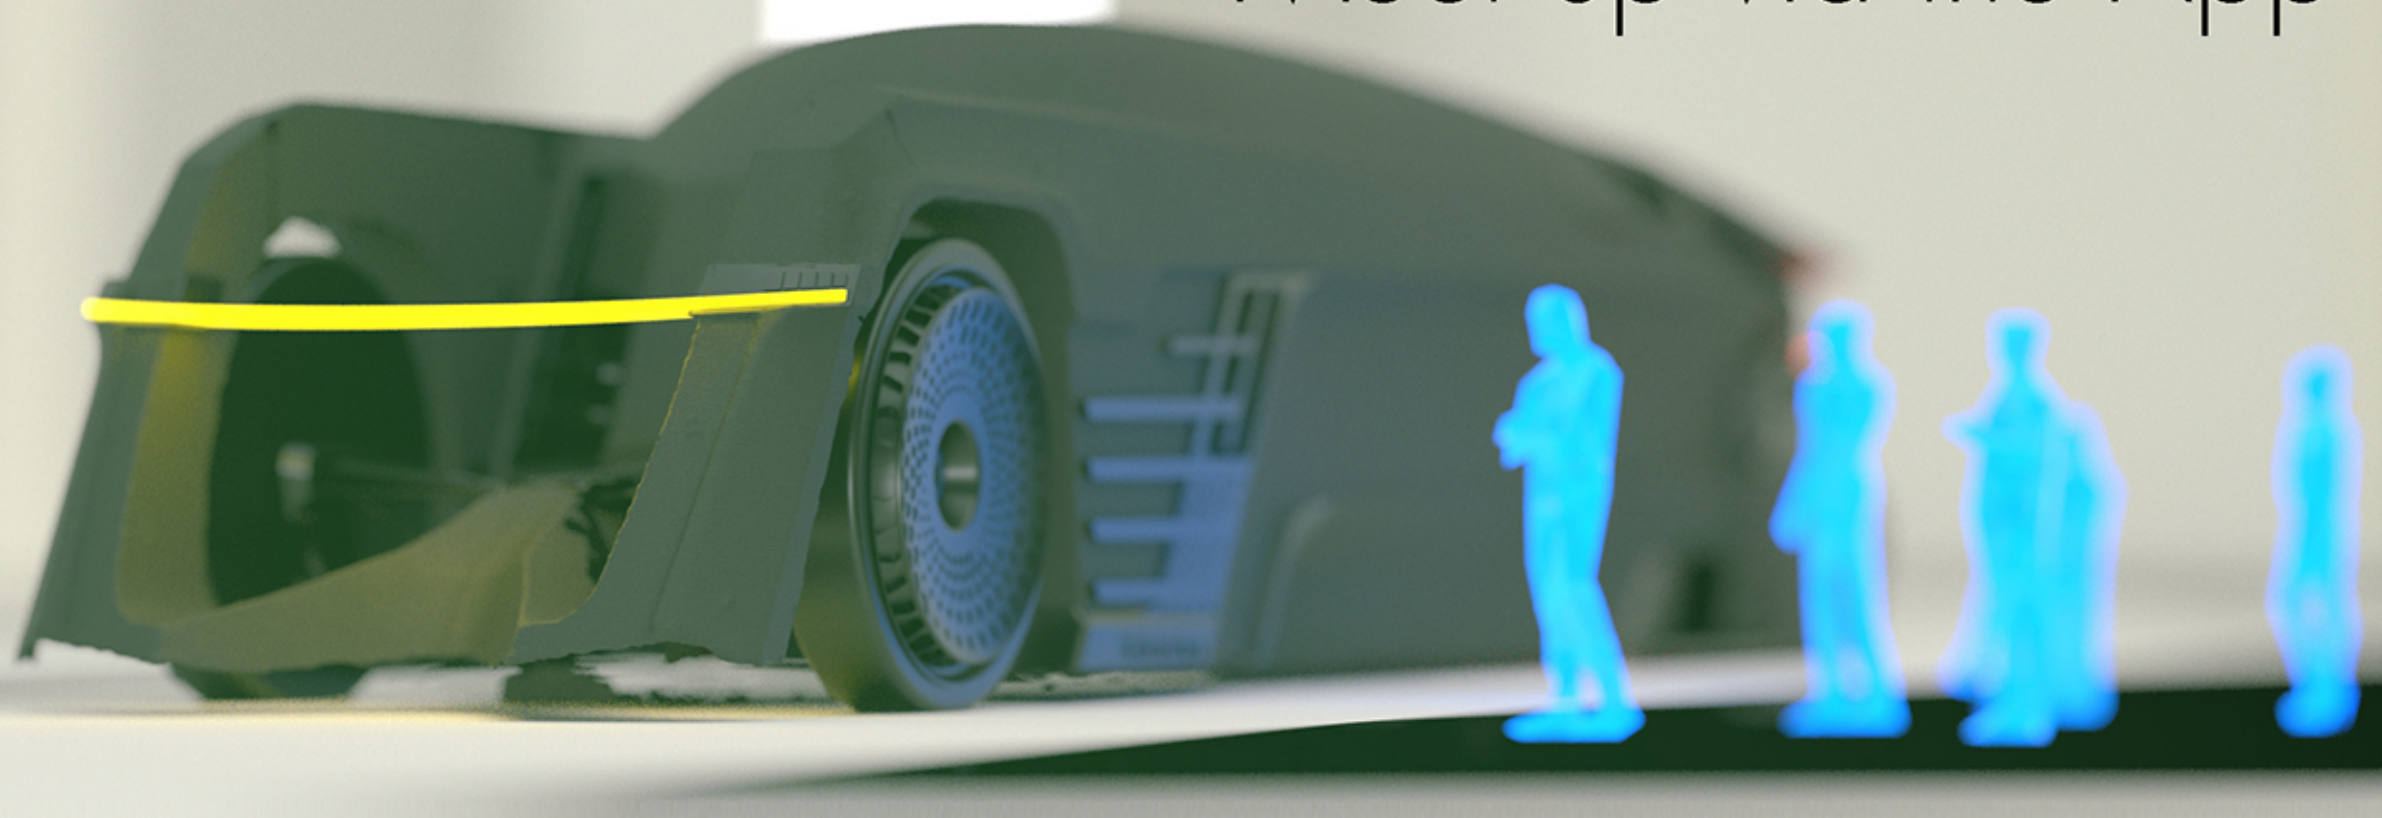

Aero efficient exterior

Removable baggage compartement

Huge wheels for good comfort
